

Cross with Cover

Product T01111020, called Cross with Cover 100x200, is a component designed to create coplanar branches within metal ducting systems. It allows the cabling to branch off in four directions from the main route, ensuring orderly, safe routing that complies with current installation regulations. It is particularly suitable for industrial and civil electrical systems that require high flexibility in cable routing. The entire range is manufactured with an internal radius of 100 mm, in line with the requirements of modern electrical systems and structured cabling infrastructures. The body of the component is made of 1.0 mm thick sendzimir galvanised steel, while the cover, equipped with a self-locking snap closure system, is made of 0.8 mm thick steel. This system ensures quick installation, operational safety and effective protection thanks to its accident prevention profile. The product is also available in hot-dip galvanised, painted and stainless steel versions to meet different requirements for mechanical strength, corrosion protection and suitability for specific environmental conditions of installation.

T0 111 1020

Length: 0

Coatings

- 01 Galvanization (Sendzimir method) - UNI EN 10346
- 03 Hot dip galvanizing - UNI EN ISO 1461
- 11 Grey RAL 7032 - ISO9227-ISO6270-ISO2810
- 15 Blue RAL 5015 - ISO9227-ISO6270-ISO2810
- 40 Stainless steel AISI 304 - UNI EN 10088
- 41 Stainless steel AISI 316L - UNI EN 10088
